

That's fine andy = If they create an Excel file just use the headings in Repmon and it can be cut and pasted in

Cow	Birth date	Lactation number	Fresh date	Serves	Bred 1	Bred 2	Bred 3	Bred 4	Bred 5	Bred 6	Bred 7	Bred last	Age	RepCode	PCI	PrvBrd	Left	Proj305	Reason Left
-----	------------	------------------	------------	--------	--------	--------	--------	--------	--------	--------	--------	-----------	-----	---------	-----	--------	------	---------	-------------

The Bred1 etc are dates of the event

PCI is previous calving interval

PrvBrd is previous times bred

Left is date left herd and reason is the code 1 to 9 used by DHIA

Birth date can be blank as long as lactation number is in

Age is age in months at calving

RepCode is DHIA codes used for pregnant, open, bred, not bred (0 to 4)

Proj305 is project M305 yield
