Creating a RepMon file from Dairy Comp 305

1. Create Items for breeding dates for services 1 through 7 and the last service
       alter
       add event
       name
               B1   Type 70 (date)   Event type 5 (bred) Number 1
               B2   Type 70 (date)   Event type 5 (bred) Number 2
               B3   Type 70 (date)   Event type 5 (bred) Number 3
               B4   Type 70 (date)   Event type 5 (bred) Number 4
               B5   Type 70 (date)   Event type 5 (bred) Number 5
               B6   Type 70 (date)   Event type 5 (bred) Number 6
               B7   Type 70 (date)   Event type 5 (bred) Number 7
               BL   Type 70 (date)   Event type 5 (bred) Number -1

2. Create a macro to output a file ? you will create two commands
       alter
       add command
       Name REPMON
       Items: list ID BDAT LACT FDAT TBRD B1 B2 B3 B4 B5 B6 B7 BL REP2

       add the second command
       Alter
       Add command
       Name REP2
Items: AGEFR RC PTBRD PDOPN ARDAT CAR M305 PFDAT FOR FDAT>12/31/99 \AB
       Switch AB adds archive cull cows

3. In the command line type REPMON
       The report should run and take you to the GRID window, depending on your
       setup of DC305

4. In GRID window, click on the ?disk? icon to save out file
       in file out box ? identify what directory you want to save file to
       in name box, write name of file with a .CSV extension
       (including the .CSV extension is IMPORTANT)

5. Ready to input file into RepMon

6. Clone REPMON to other COWFILE1.DAT files
       Type CLONE in command line
               Clone from 1.DAT file ? Yes
               Clone to c:\herds\file you desire to clone to
               File destination is DAT ? Yes, or click on it
               Click on Clone command, item and item table
